1.2	Part 2 . . . . .	2
<b>2</b>	<b>Observations</b>	<b>2</b>

# 1 Results

## 1.1 Part 1

After the 32 iterations we have:

- $X = 00011010000000000000$
- $Y = 11111010101010101010$
- $Z = 01101010111100001010101$
- 32 keystream bits: 10000011011100000111100000011001

## 1.2 Part 2

- Plain text before encryption: 0123456789ABCDEF.
- Cipher text: BD2B2FA555AE7017.
- Plain text after encryption and decryption: 0123456789ABCDEF.

# 2 Observations

The implementation of part 2 was straightforward while part 1 was a little harder to implement. Given the simplicity of both algorithms, my guess is that they can not be used to encrypt really important confidential data.
